The Anti-Corruption Academy of Nigeria asserts the right to the production and ownership of the contents of this Policy Brief.

The matter of secret expenditure by government agencies raises issues of corruption and national security. These secret expenditures are included as security votes in the budgetary process. This Policy Brief recommends approaches for effectively addressing challenges posed by the current system of using security votes.

PREFACE

The Independent Corrupt Practices and other Related Offences Commission (ICPC) through its research and training arm, the Anti-Corruption Academy of Nigeria (ACAN) conducts periodic Policy Dialogues designed to bring topical anticorruption issues to the fore of national discourse. Research conducted at ACAN on the issues and discussed at the Policy Dialogues form the basis for periodic ACAN Policy Briefs.

In relation to the instant Policy Brief, ACAN's research findings were presented at the Policy Dialogue on "Accountability for Security Votes" held on September 11, 2019, at the ICPC Headquarters. The Dialogue had participants from civil society, academia, the military, security and intelligence agencies, anti-corruption agencies, law enforcement agencies, political parties, public service, including elected officials and the media. Input from stakeholders were taken into account in preparing this Policy Brief. To further enrich this Policy Brief, a draft was circulated among stakeholders for comments and the comments are reflected in the final copy.

In specific relation to the National Anti-Corruption Strategy (NACS), the Dialogues will seek to contribute towards the attainment of the NACS strategic objective of promoting an improved legal, policy and regulatory environment for the fight against corruption. In this regard, the Dialogues will address broad foundational gaps and weaknesses in institutional structures or frameworks which may undermine anti-corruption efforts.

ACAN wishes to acknowledge the contributions of stakeholders who have contributed to the success of the Policy Dialogue and this Policy Brief on the subject of security votes. In particular the Academy is grateful to the Honourable Chairman of the ICPC, Professor Bolaji Owasanoye and members of the Board; the Chairman of the Governors' Forum, His Excellency Dr. Kayode Fayemi, who presented the Keynote at the Policy Dialogue; the Chief of Army Staff, Lt. General Tukur Yusuf Buratai; the Auditor-General of the Federation; Office of the National Security Adviser; the Department of State Services; the Economic and Financial Crimes Commission (EFCC), the Director-General of the Nigerian Law School, the Director-General of the Nigerian Institute of Advanced Legal Studies, State Governments, and the many Civil Society Organisations that participated in the Policy Dialogue.

The organisation of the Policy Dialogue was coordinated by Dr. Elijah Oluwatoyin Okebukola, a Senior Research Fellow with the Academy. Dr. Okebukola's position is funded by the Department for International Development, DFID. The Academy is grateful to the DFID for this important support for its work. This Policy Brief is authored by Dr. Okebukola being one of the outcomes of his work with the Academy. The Academy appreciates his diligence and commitment.

Professor Sola Akinrinade, FNAL

Provost, Anti-Corruption Academy of Nigeria March 2020

FOREWORD

The Independent Corrupt Practices and other Related Offences Commission (ICPC) places a huge premium on evidence-and-knowledge-based anti-corruption interventions. It is in this context that the Anti-Corruption Academy of Nigeria (ACAN), the research and training arm of the ICPC, is mandated to conduct cutting edge research for practicable prevention, enforcement and post-enforcement solutions. The research activities of ACAN are required to go beyond stimulating discussions to proffering evidence, knowledge and keys for resolving challenges thrown up by corruption.

I am pleased that the second edition of the ACAN Policy Brief Series engages the knotty issue of security votes in Nigeria. There has been a lot of talk on the nature of security votes as an enabler of corruption. This Policy Brief goes beyond talking about the problem to recommending guidelines for stakeholders in preventing corrupt use of security votes. The process that resulted in this Policy Brief involved the input of governmental and nongovernmental stakeholders. In addition to consultations with stakeholders, a Policy Dialogue was held to discuss the challenges associated with security votes. Recommendations contained in this Policy Brief, flow from ACAN research, consultations with stakeholders on the draft Policy Brief.

The consultations and National Policy Dialogue revealed that, there are divergent views on the nature and necessity of security votes. As it is the case with all ACAN Policy Briefs, the current issue will help governmental and non-governmental stakeholders filter the discussion and concentrate on achievable steps.

In presenting this Policy Brief to all stakeholders, it is important to note that security votes are not the only items that are abused in budget formation and implementation. So, the focus of this Brief on security votes does not detract from the enormity and heinousness of other forms of corruption in the budgetary process. I believe that bona fide stakeholders will benefit from this Policy Brief and its recommendations which represent a significant blow against the corrupt use of security votes in Nigeria.

Professor Bolaji Owasanoye

Chairman Independent Corrupt Practices and Other Related Offences Commission Abuja March 2020

EXECUTIVE SUMMARY

In the Nigerian budgetary process, moneys appropriated for the use of Ministries, Departments and Agencies (MDAs) of government are described as votes. Security votes are items in the Federal and State Government budgets. However, unlike regular budgetary items, the purposes for which security votes are to be spent are not specified or discoverable from the Appropriation Act (Appropriation Law for the States) or the budget preparatory documents.

In the 2019 Federal Budget, a total of N21,848,004,970 (Twenty-One Billion, Eight Hundred and Forty-Eight Million, Four Thousand, Nine Hundred and Seventy Naira) was appropriated as security votes for 162 (One Hundred and Sixty-Two) MDAs.

As exemplified by the 2019 Budget, there is no apparent logic or principle that determines the amounts appropriated as security votes. The amounts budgeted as security votes range from Three Thousand Six Hundred Naira (N3,600.00), being the lowest amount appropriated for an MDA as security vote, to Four Billion Two Hundred and Eight Million Seven Hundred and Sixty Thousand One Hundred and Fifty-Nine Naira (N4,208,760,159.00) being the highest amount appropriated for an MDA.

There is also no apparent basis for determining the MDAs for which security votes are appropriated. In the 2019 Budget, recipients of security votes include Boards, Centres, Committees, Commissions, Councils, Forest or National Parks, Hospitals, Polytechnics, Secondary Schools and Universities. Other recipients of security votes include Anti-Corruption Agencies, Armed Forces, Intelligence Services and Law Enforcement Agencies. Apart from security votes, the budget appropriates funds for specific and defined security matters such as purchase of security equipment, construction of security equipment, security charges and printing of security equipment. In addition, moneys are appropriated for items such as purchase of uniforms, construction of buildings, construction of perimeter fences, purchase of vehicles etc.

The main distinction between security votes and other items of security in the budget is that the security purposes for which the former should be used are not specified in the budget documents. This has resulted in public officials believing that security votes can be used for anything without question. Public officials have been found to have acted on this erroneous belief to corruptly enrich themselves from funds appropriated as security votes.

It is therefore necessary to spell out the legitimate use of security votes. Security votes are to be spent on matters and operations that require confidentiality in deterring, neutralising or containing threats or harmful conduct against the country. Such threats or harmful conduct are those that are ultimately against the nation even if their immediate victims are individuals, officials or institutions. The threats or harmful conduct must be such that require absolute ACAN POLICY BRIEF SERIES No. 2 - 2020

ACCOUNTABILITY FOR SECURITY VOTES: PREVENTING CORRUPTION IN SECURITY BUDGETING WITHOUT JEOPARDISING NATIONAL SECURITY

confidentiality in implementing counteracting activities or steps. Security votes are appropriated moneys spent on defence and security items or services that are not openly disclosed to the public. Such items may cover new weaponry, covert campaigns, sensitive equipment, and troops or personnel for secretive operations.

Clearly, many of the MDAs that received appropriations for security votes do not have the mandate to deal with the kind of covert security operations that require secret expenditure. It is in this context that it is emphasised that an MDA is eligible to security votes only if it has continuous core security function (CCSF). An MDA has CCSF if its primary mandate demands the prevention or suppression of domestic or foreign threats of harm against the people of Nigeria, public and private institutions of the country, or the State as an entity. MDAs with CCSF conventionally have the statutory or constitutional mandate to gather and process local and foreign intelligence; work with military and intelligence allies of the country; counter military and intelligence adversaries of the country; engage in war or armed conflict on behalf of the country; investigate crimes against individuals, institutions and the State (country); arrest and prosecute offenders; protect witnesses and whistle-blowers; deter organised crime. In reaction to the history of abuse of security votes, many have called for a total abolition of security votes in the budgetary process. However, a total abolition of security votes would mean that details of confidential security expenditure would be available to members of the public. The reality of global practices indicates that most countries do not publicly disclose the details of their confidential security expenditure. The practicable and pragmatically achievable alternative to total abolition of security votes is to have clear parameters for guiding the appropriation of security votes, determining its use and engendering accountability of users. In this context it is recommended that:

- i. The National Security Council should clarify things by issuing an official definition of security votes. The definition should take account of the fact that secret expenditure on security matters should be for items which cannot be disclosed to the public so as not to jeopardise security operations, means, methods, sources and intelligence. There is no compelling need for social or human security expenditure to be secret. Indeed, their impact is more profound when known to the recipients and public at large, so, social or human security spending should not be included in items for which secret expenditure can be made. In all, a proper definition will guide stakeholders in their application and monitoring of security votes.
- ii. Security votes should be appropriated for only MDAs with CCSF.
- iii. MDAs may have votes for security-related issues but not for issues that cannot be openly disclosed. An MDA that does not have CCSF should not have any need to spend money in secret.

- iv. Security votes should be linked to the strategic and operational plans of the receiving MDA. To this extent, the monitoring and evaluation plans of these MDAs should include their secret expenditure.
- v. Security votes are not for items already included in the budget. Duplication of budgetary items is prohibited, and such items cannot be duplicated using security votes as a disguise.
- vi. New legislation in relation to security votes should complement existing laws preventing abuse of public funds and not conflict with those laws. Particular note should be made of avoiding the erroneous view that the constitution prevents the scrutiny of security votes.
- vii. There is need for a permanent national security clearance scheme.
- viii. There needs to be a categorisation of items on which security votes are spent and the level of clearance required to have access to the items
- ix. A practicable system of legislative oversight can be implemented after the categorisation of items on which security votes are spent and a national security clearance system have been put in place.
- x. Internal standard operating procedures for disbursing and monitoring security votes should be developed by MDAs with CCSF.
- xi. External audit of security votes by the Auditor General.
- xii. All MDAs without CCSF in the 2019 budget should be audited to ensure that they have not been using security votes for corrupt enrichment.

PREVENTION OF CORRUPTION IN SECURITY BUDGETING IN NIGERIA: ENGENDERING ACCOUNTABILITY FOR SECURITY VOTES WITHOUT JEOPARDISING NATIONAL SECURITY

1. Introduction

The Federal and State budgets have security votes listed among the items for which money is appropriated for public use. Unlike other items in the budget the details of things 'security votes' should be used for are not specified in the budget.

Ordinarily, the budget creates a documentary context for tracing public expenditure. It supplies information on the purposes for which public funds are to be expended. It further specifies the public institutions which are responsible for disbursing and being held accountable for the funds. The The budget allows all stakeholders to know:

- 1. the amount of money appropriated to be used for the benefit of the public.
- 2. the matter or item on which the money is to be spent.

budget therefore is an anti-corruption mechanism that serves to create systemic checks and balances in the appropriation and spending of public funds. The budget, therefore, provides an avenue for investigating the use of appropriated funds. The non-inclusion of the purposes for which security votes are meant, naturally creates a lack of transparency that easily engenders poor accountability.

Although this Policy Brief focuses on the Federal Budget and Federal Ministries, Departments and Agencies (MDAs), the discourse also applies at the sub-national level. States also adopt the same approach of including security votes in their budgets.

The security vote as an item in the budgetary process raises a major problem in the sense that the amount appropriated is specified in the budget, but the specific matter or item on which it is to be spent is not mentioned. This raises some challenges to accountability as it presupposes that the security vote can be used for any purpose.

Indeed, some public servants believe that security votes are personal emoluments that accrue to them by virtue of their position or office. The extent to which this belief is entrenched can be illustrated by the case of Ikeduru Local Government Area v. Barr. Kenneth C. Uzoechi. In that

There is a sense of entitlement to personal Use of Security Votes

case, the Respondent claimed the sum of N3,892,444.30 (Three Million, Eight Hundred and

There are Public Servants that hold the mistaken view that security votes are remunerative emoluments.

Ninety-Two Thousand, Four Hundred and Forty-Four Naira, Thirty Kobo) as debt resulting from unpaid salary and allowances. Out of the total amount claimed, N450,000.00 (Four Hundred and Fifty Thousand Naira) was claimed as imprest, while N700,000.00 (seven Hundred Thousand Naira) was claimed as security vote. The claims in this case demonstrate the strong impression that imprest and security vote exist for the benefit of the public office holder. Indeed, a suspect investigated by the Independent Corrupt Practices and other Related Offences Commission (ICPC) for abuse of public funds expressed the belief that the security vote was his own official 'daily bread' (Recommendation 12).

The erroneous opinion that security votes are for the unfettered personal use of the public servant is not limited to the lower echelons of service. Rather it percolates from the higher levels of public stewards. For example, in the case of Nyame v FRN, it was was contended on his behalf that "as a governor, the security votes were his personal entitlement to be used as he pleased without any responsibility to explain how he used same and that since it is his entitlement, he cannot be said to have stolen same."

In response to the contention that security votes are the entitlement of the public official, the Court of Appeal held that:

"In our country Nigeria, there is a pervasive proclivity of public officers to regard or treat security votes given to them for the security of the State as their personal entitlement or funds, the expenditure of which they are not accountable to the government that gave them the funds to be used for the public purpose or the citizens for whose security it was meant...the notion that certain Public Funds meant to be used for the security of the State are not accounted for and therefore cannot be stolen is not correct."

COURT OF APPEAL

"Security votes, being Government Funds to be used for the security of the state, must be accounted for by the recipient"

¹ (2013 LPELR-22511(CA).

² Imprest is money given for the running of the office.

³ CA/A/658C/2018.

Public officials sometimes posit that security votes a r e a p p l i e d towards social security matters such as provision of welfare and p a l l i a t i v e interventions for

Some Public servants erroneously believe that security votes are funds to be spent on welfare, victim support, emergencies and social interventions

citizens in need of financial or related assistance. It is also argued that security votes can be applied towards providing support for victims of crimes, and succour for people or communities devastated by natural or man-made disasters. In this context, it is argued that the expression security goes beyond the span of military, defence, intelligence, law enforcement and anti-corruption.

The proposition that security votes can be applied towards a broad spectrum of issues is frequently supported by the provision of the Constitution of the Federal Republic of Nigeria, 1999 (1999 Constitution) which stipulates that: "*the security and welfare of the people shall be the primary purpose of government.*" This constitutional provision is contained in a chapter that contains "fundamental objectives and directive principles of state policy." The constitutional provision stipulating the primacy of the people's security and welfare is within the overall context of the immediate preceding constitutional provision that the "*Federal Republic of Nigeria shall be a State based on the principles of democracy and social justice.*"

⁴ This position was canvassed by some participants of the National Policy Dialogue on accountability for security votes held at the ICPC Headquarters on September 11, 2019

⁵ Section 14 (2) (a) Constitution of the Federal Republic of Nigeria 1999 (1999 Constitution).

⁶ Chapter 2, 1999 Constitution.

⁷ Section 14 (1) 1999 Constitution.

In addition to the proposition that security votes are to be used for a broad spectrum of discretionary matters, there is also a widespread view that the 1999 Constitution forbids inquiries into how security votes are expended.

It is in the light of the foregoing that the Anticorruption Academy of Nigeria (ACAN) facilitated a National Anti-Corruption Policy Dialogue on Accountability for Security Votes. The Policy Dialogue took place on September 11, 2019 at the Headquarters of the ICPC in Abuja. IT IS AN URBAN MYTH THAT THE CONSTITUTION STIPULATES THAT SECURITY VOTES SHOULD NOT BE AUDITED. NOTHING IN THE 1999 CONSTITUTION OR ITS AMENDMENTS LENDS CREDENCE TO THIS MYTH

The Policy Dialogue had the main objective of contributing towards the promotion of an improved legal, policy and regulatory environment for the fight against corruption. This is a major strategic objective of the National Anti-Corruption Strategy (2017-2021).

The Dialogue had participants from civil society, academia, the military, security and intelligence agencies, anti-corruption agencies, law enforcement agencies, political parties, civil service, public service including elected officials and the media. The Policy Dialogue was designed to have the impact of engendering accountability in the use of security votes without jeopardising national security.

This Policy Brief draws largely from research conducted at ACAN (presented at the Policy Dialogue) and discussions on the issues by participants at the Dialogue. Prior to its finalisation, this Policy Brief was circulated among key stakeholders, including those that participated in the Dialogue. The perspectives and positions of all participating stakeholders were taken into account. Following the structure of discussions at the Dialogue, this Brief will concentrate on the following:

- Definition of security votes, legitimate users and matters for which security votes may be lawfully applied
- Entrenching accountability in the use of security votes
- Categories of persons whom may be funded or paid from security votes
- Modalities and frequency of rendering account for security votes received or used

⁸ The NACS provides the overall strategic direction for anti-corruption policies, plans and actions.

2. Definition, Purpose and Legitimate Users

In the Nigerian budgetary process, moneys appropriated are described as votes. In the ordinary sense, therefore, it would appear that security votes are moneys appropriated for security matters. However, there are several security matters for which moneys are appropriated in the budget. The budget identifies the security purposes for which these moneys are appropriated.

However, a peculiar item of security is classified as security vote without its specific purposes being identified. This vote without any specifically ascribed purpose is the security vote. The expression security vote appears to be exclusively Nigerian. It refers to an item in the budget, which is appropriated for security matters but the specific matters it will be applied to are not defined in the budget. (See Recommendation 1).

In the 2019 Budget, a total of N21,848,004,970 (Twenty-One Billion, Eight Hundred and Forty-Eight Million, Four Thousand, Nine Hundred and Seventy Naira) was appropriated as security votes for 162 (One Hundred and Sixty-Two) Ministries, Departments and Agencies (MDAs). The distribution of this sum across MDAs is depicted in Table 1 below. Appendix 1 contains the full list of the MDAs and the amounts of security votes appropriated for each.

POLIC

SERIES No. 2 - 2020

Some MDAs that had a budget for security votes, also had moneys appropriated for other security matters.

Out of the 162 MDAs that received security votes, 20 also had moneys appropriated for purchase of security equipment. As shown in Table 2 below, a total of **#50,654,211,652 (Fifty Billion, Six Hundred and Fifty-Four Million, Two Hundred and Eleven, Six Hundred and Fifty-Two)** was appropriated for purchase of security equipment. The purchases were for: Defence and Security Equipment, Cyber Security Equipment, Defence Equipment, and a more generic category consisting of Security Equipment. Appendix 2 contains a full list of the MDAs that had a budget for purchase of security equipment as a separate item from security votes.

Table 2: Purchase of Security Equipment

Type of Purchase	Amount
DEFENCE AND SECURITY EQUIPMENT	3,768,285,000
PURCHASE OF CYBER SECURITY EQUIPMENT	212,985,633
PURCHASE OF DEFENCE EQUIPMENT	20,218,272,051
PURCHASE OF SECURITY EQUIPMENT	26,454,668,968
Grand Total	50,654,211,652

As depicted in Table 3 below, the sum of **#34,508,941,235** was budgeted for construction of security equipment as a separate item from security votes. Appendix 3 contains the list of the 8 MDAs that had a budget for construction of security equipment.

Table 3: Construction of Security Equipment

A large number of MDAs that budgeted for security votes also had funds appropriated for security charges. The security charges are paid to security service providers including private licenced guard companies. Table 5 shows that a total of **N4,277,214,369** (Four Billion, Two Hundred and Seventy-Seven Million, Two Hundred and Fourteen Thousand, Three Hundred and Sixty-Nine Naira) was budgeted for MDAs to pay security charges. Appendix 5 contains the list of 118 MDAs that had funds for both security votes and security charges

118 of the 162 MDAs Additional #4,277,214,369 Security Charges

2.1. What is the Definition and Purpose of Security Votes?

GIVEN ALL THE OTHER PROVISIONS MADE FOR SECURITY EXPENDITURES, THE QUESTION ARISES AS TO THE PURPOSE OF HAVING SECURITY VOTES The budget appropriates funds for specific and defined security matters such as purchase of security equipment, construction of security equipment, security charges and printing of security equipment. In addition to these four security matters, budgetary provisions are made for items such as purchase of uniforms, construction of buildings, construction of perimeter fences, purchase of vehicles etc.

There is a popular view among academics, activists and even public officials that security votes serve as a means to disguise the stealing of public funds. Proponents of this view frequently call for a total abolishment of the use of security votes. This position is in direct relation to the seeming lack of accountability in the use of security votes.

Security votes are to be spent on matters and operations that require confidentiality in deterring, neutralising or containing threats or harmful conduct against the country. Such threats or harmful conduct are those that are ultimately against the nation even if their immediate victims are individuals, officials or institutions. The threats or harmful conduct must be such

Security Votes are to be expended on security matters that require confidentiality. The confidentiality is required to prevent adversaries from discerning and taking advantage of priorities, capabilities, sources, plans and methods.

that require absolute confidentiality in implementing counteracting activities or steps. Security votes are appropriated moneys spent on defence and security items or services that are not openly disclosed to the public. Such items may cover new weaponry, covert campaigns, sensitive equipment, and troops or personnel for secretive operations.

In, essence security votes are to be spent on confidential security interventions (See Recommendation 5). The confidentiality is required to prevent adversaries from discerning national security priorities. Furthermore, concealing the confidential aspects of security expenditure helps to obscure the operational capabilities of security institutions. It also helps to protect the identity of sources and the existence or effectiveness of methods.

Continuous Core Security Function (CCSF) An MDA has a continuous core security function if its primary mandate demands the prevention or suppression of domestic or foreign threats of harm against the people of Nigeria, public and private institutions of the country, or the State as an entity.

2.2. Which MDAs are Legitimate Users of Security Votes?

Although the security of the state concerns every citizen, the responsibility and capability to effectively perform core security functions require specialised institutional responses. In particular, tactical and strategic security considerations are to be taken into account in determining matters that entail confidential security expenditure.

The relevant tactical and strategic security analysis is exclusively within the purview of professionals that have the remit to perform the core security functions of the State. In this regard, MDAs that do not have a continuous core security function (CCSF) are not fit and proper recipients of security votes (See Recommendation 2).

An MDA has CCSF if its primary mandate demands the prevention or suppression of domestic or foreign threats of harm against the people of Nigeria, public and private institutions of the country, or the State as an entity. MDAs with CCSF conventionally have the statutory or constitutional mandate to:

- gather and process local and foreign intelligence.
- work with military and intelligence allies of the country.
- counter military and intelligence adversaries of the country.
- engage in war or armed conflict on behalf of the country.
- investigate crimes against individuals, institutions and the State (country).
- arrest and prosecute offenders.
- protect witnesses and whistle-blowers.
- deter organised crime.

The present budgetary system allows security votes expenditure by diverse MDAs that do not have a continuous core security function. As shown in Table 6 below many MDAs in the top half (Numbers 1-81) of those that received security votes in the 2019 Budget do not have a core security function. Figure 1 is the alphabetical listing of the top half. Appendix 6 contains the same listing in order of the amount received.

The top recipients of security votes include institutions with core mandates for agriculture, auditing, awards, budget & planning, civil service administration, education, environment, health, identity management, industry and trade, information, infrastructure, labour and employment, legal, lottery, mines & steel, petroleum, science and technology, transport and women affairs.

It is conceivable that some of these recipients of security votes may have occasional or ad hoc security functions. The reality however remains that they do not have continuous core security functions. In addition, whatever security needs they have can be met by MDAs with CCSF (See Recommendation 3).

ACAN

POLICY BRIEF SERIES No. 2 - 2020

14

In addition to appropriating security votes to MDAs without a core security function, there is no apparent rhyme or reason to the determination of the amount of security votes that MDAs receive. There is nothing in the list of top recipients that suggests or indicates the existence of any inherent logic in the allocation of security votes (See Recommendation 4).

¹⁰ Wuyi Omitoogun and Eboe Hutchful, *Budgeting for the Military Sector in Africa The Processes and Mechanisms of Control.* p 177 where the authors insisted that ""Each budget contains a number of contingency votes, security votes, 'service-wide' votes and margins for variation for which spending breakdowns are not provided and under which unbudgeted military projects can be financed".

The arbitrariness in the determination of the quantum of security vote is more pronounced in the MDAs at the bottom half of the list of security vote recipients in the 2019 Budget. This MDAs are listed in Table 7 below which shows that the lowest amount appropriated as security votes was N3,600.00 (Three Thousand Six Hundred Naira). The list of the bottom half of security vote recipients is contained in Appendix 7.

Majority of the MDAs in Table 7 are charged with core functions relating to agriculture, civil service administration, education, environment, health, information, legal matters, science and technology, transport and water resources.

3.0 Entrenching accountability in the use of security votes

Presently, there are no government-wide guidelines for the use of security votes. Each MDA applies its discretion and internal protocols in the use of security votes. Many of the internal protocols are ad hoc and undocumented. It is therefore an area that is prone to abuse.

To forestall abuse of security votes, two main conflicting positions exist. On the one hand, there is the stance that security votes should be stopped completely. On the other hand, there is the position that guidelines and parameters should be established to prevent corrupt use of security votes.

3.1 The Case for a Total Abolishment of Security Votes

There is the need to address the question of the necessity of having the security vote in the first place. At the Policy Dialogue on accountability for security votes, 2 participants objected to the existence and use of security votes.

The argument is made that the use of security votes is unnecessary and anomalous and should be completely stopped.

The objectors called for a total abolition of security votes. Following exchange of views with other dialogue participants, one of the two, subsequently called for a change in the nomenclature to anything else but security votes. The view that security votes should be abolished has been expressed, elsewhere, by academics and other commentators.

Arguments for the total stoppage of the use of security votes are premised on the dangers

portended by corrupt use of security votes. Among others, corruption in the use of security votes can lead to:

- use of funds for private purposes
- use of funds for political purposes
- use of funds to finance criminal activities
- purchase of goods and services above their real value.
- depriving personnel of receiving their due payments.
- unlawful sale, transfer or appropriation of property and equipment
- purchase of second-hand or otherwise useless equipment
- unnecessarily expensive purchases
- operational ineffectiveness
- eroded public trust and confidence
- reluctance of reputable companies to transact with the country
- ready excuse for foreign powers to negatively brand the country in fulfilment of their own agenda

3.2 The Case for Establishing Parameters for Use of Security Votes

A total abolition of security votes would mean that details of confidential security expenditure would be available to members of the public. Actual global practice indicates that most countries do not publicly disclose the details of their confidential security expenditure.

It is usual for countries to seek to protect their security architecture by keeping details relating to their operations secret. For example, prior to 2013 the heads of Britain's security and intelligence services had never appeared before open parliament. They appeared publicly for the first time on 7 November 2013, when Sir Iain Lobban (Director GCHQ), Andrew Parker (Director General MI5) and Sir John Sawers, (Chief of MI6), appeared in Westminster. "This was a significant event representing the first ever open evidence session for Parliament's Intelligence and Security Committee (ISC) and the first time Parliamentarians had enjoyed the opportunity to publicly question spy chiefs." "In Britain the ISC of Parliament is the statutory body charged with scrutinising the agencies and since 2013 is more accountable itself to Westminster."

MOST COUNTRIES HAVE SECRET SECURITY BUDGETS SIMILAR TO NIGERIA'S SECURITY VOTES. THE LEAST CORRUPT OF THESE COUNTRIES HOWEVER SUBJECT THEIRS TO OVERSIGHT AND CONTROL

¹¹ Stephen Barber, 'Can Parlia mentary Oversight of Security and Intelligence Be Considered More Open Government than Accountability?' (2017) 18 International Public Management Review 45.

¹² ibid. p. 45.

¹³ ibid. p. 45.

¹⁴ ibid. abstract

In the USA, the budget of the Intelligence Community was classified and not known to the public until 2007. Funding plays a critical role in most of the operations that security agencies embark upon. Information relating to the use of funds can therefore be analysed and synthesised to elicit critical information about specific security operations or the general set up of the security architecture. For example, data relating to moneys spent on informants can lead to information on the existence, number and probably identity of the said informants.

Significant harm to National Security can arise from the public disclosure of some information or data relating to confidential security expenditure. Therefore, where funds are specifically appropriated for confidential security matters, secrecy becomes necessary to:

- prevent the targets of intelligence operations from becoming aware that they are
- under surveillance.
- prevent targets and adversaries from learning about methods in use
- protect the identity and lives of personnel and sources.
- ensure the safety of the persons who are under protection
- maintain the confidentiality of information provided by foreign allies
- protect the technical or tactical details of operational methods
- protect details of priorities
- protect details of and strategic deployments, procurements and developments
- ongoing covert operations and investigations
- avoid being compromised in various ways by rivals or adversaries
- protect the identity and personal data of individuals who are under surveillance

Notwithstanding the importance of secrecy in certain aspects of security, appropriate mechanisms must be entrenched so that secrecy does not vitiate accountability. Accountability for funds at the disposal of a public officer is necessary to prevent corrupt use of such funds.

In the 2015 Government Defence Anti-Corruption Index (GDAI), Nigeria ranked among countries with very high corruption risk. However, many other countries especially prima facie democratic countries such as the United States of America and the United Kingdom ranked better than Nigeria. Most of the countries that rank better than Nigeria, allow their defence and security expenditure to be subject to legislative oversight, executive control or management, and judicial supervision. In holding users of secret budgets accountable, the three arms of Government have both separated and shared powers/responsibilities.

¹⁵ Mark A Chinen, 'Secrecy and Democratic Decisions' (2009) 27 QLR 1.

Legislative oversight includes subjecting security spending to the scrutiny of legislative committees. Executive control includes checks and balances consisting of security clearance schemes, approval limits, supervisory protocols and disciplinary procedures. Judicial supervision includes determination of the validity of freedom of information requests or refusals, determination of legality or constitutionality of specific expenditures etc.

There are valid reasons for secrecy, but these valid reasons on their own do not prevent abuse of security votes.

3.3 Parameters for Engendering Accountability

Prevention of corrupt practices is the first and probably the most important step in the fight against corruption. It is in recognition of the importance of preventive measures that the United Nations Convention Against Corruption (UNCAC) requires state parties, including Nigeria, to promote transparency and accountability in the management of public property and funds.

Effective public accountability involves a combination of internal and external mechanisms. These operate together to form a system of checks and balances. The most appropriate systems of checks and

ACCOUNTABILITY FOR SECURITY VOTES CAN BE ENGENDERED THROUGH A SYSTEM OF CHECKS AND BALANCES BASED ON VALID PRINCIPLES AND PRACTICABLE RULES

balances are those based on principles and rules. Arbitrary ultimatums and orders are far less efficient. In relation to security votes accountability can be engendered if practicable rules of accountability are developed from valid principles.

Principles that pertain to and should be applicable to accountability in the use of security votes include:

- use of security votes should be guided by the rule of law
- prevention of corrupt use of public funds;
- reduction of discretion in the use of public funds;
- enhancement of pilfering detection structures in the use of public funds;
- promotion of penalties for abuse of public funds; etc.

Rules that that can strengthen accountability for security votes include those that provide guidance for:

- levels of authorisations for, using reporting and monitoring security votes;
- determination of the manner in which security votes are to be expended
- steps to be taken upon discovery of corrupt use of security votes;
- procurements involving the use of security votes;
- payments to natural and legal persons from security votes; etc.

¹⁶ Article 5(1) United Nations Convention Against Corruption (UNCAC).

In setting out accountability parameters for security votes, it is necessary to emphasise that there are existing laws and guidelines that are applicable to all public funds including security votes (Recommendation 6). It bears emphasis that security votes are not personal emoluments. Rather they are public funds. This is made clear by the Finance (Control and Management) Act (1958), which defines public moneys to include moneys held in official in capacity by any officer in the public service of the Federation or any State or by any agent of the Government either alone or jointly with any other person. It is instructive that the public nature of the funds is not diminished where the funds are temporarily held or subject to a specific allocation (appropriation as security votes would be an example of specific allocation).

The people that can disburse or authorise security votes should have appropriate levels of security clearance (Recommendation 7). The overall system can apply to all those involved in various aspects of sensitive national matters. However, the discussions and recommendations

in this Brief are limited to those who are part of or connected with MDAs that exercise CCSF. The various clearance levels will determine the categories of security votes that a person can disburse or authorise (Recommendation 8). In setting clearance levels, categorisations and classifications, it is important to avoid overclassification.

"When everything is classified, then nothing is classified"

Justice Potter Stewart

As contemplated by the 1999 Constitution, there should be some level of legislative oversight on the use of security votes (Recommendation 9). The 1999 Constitution empowers the National Assembly (NASS) to investigate any matter or thing with respect to which it has power to make laws. "Requisite confidentiality and a significant measure of legislative accountability can coexist in feasible oversight procedures."

In particular, the legislature can investigate the conduct of affairs of any person, authority, ministry or government department charged, or intended to be charged, with the duty of or responsibility for — (i) executing or administering laws enacted by the National Assembly; and (ii) disbursing or administering moneys appropriated or to be appropriated by the National

¹⁷ Section 2, Finance (Control and Management) Act (1958).

¹⁸ Section 2 (b), Finance (Control and Management) Act (1958).

¹⁹ Ibid.

²⁰ The Pentagon Papers 1971 US Supreme Court.

²¹ Section 88 (1) 1999 Constitution.

²² Robin Berman Schwartzman, 'Fiscal Oversight of the Central Intelligence Agency: Can Accountability and Confidentiality Coexist Notes' (1974) 7 New York University Journal of International Law and Politics 493.

²³ Section 88 (1) (i) 1999 Constitution.

Assembly. The Appropriation Act which gives life to the Budget containing security votes is a law to be administered by relevant MDAs. Security votes are also moneys to be disbursed or administered by MDAs. Constitutionally, therefore, security votes are subject to the oversight authority of the National Assembly.

Internally, the disbursement of security votes should be controlled by the MDAs in such a manner that allows for appropriate record keeping. The Chief executive of the MDA has the power to direct its policies and activities. He or she therefore bears ultimate responsibility for accounting for security votes (Recommendation 10). In addition to internal control, the security vote should be subject to appropriate external audit (Recommendation 11).

From the accountability standpoint, security votes differ from the other security items because the budget does not specify the security matters for which security votes are to be applied.

4. Recommendations

Based on the foregoing, the following recommendations are proposed for key stakeholders including the National Security Council (NSC), the NASS, Civil Society Organisations (CSOs), the National Security Adviser (NSA), Anti-Corruption Agencies (ACAs)

Recommendation	Implementers
Recommendation 1: The National	The NSC
Security Council should clarify things by	
issuing an official definition of security	
votes. The definition should take account	
of the fact that secret expenditure on	
security matters should be for items	
which cannot be disclosed to the public so as not to jeopardise security	
operations, means, methods, sources	
and intelligence. There is no compelling	
need for social or human security	
expenditure to be secret. Indeed, their	
impact is more profound when known to	
the recipients and public at large, so,	
social or human security spending should	
not be included in items for which secret	
expenditure can be made. In all, a proper	
definition will guide stakeholders in their	
application and monitoring of security votes.	
VULES.	

²⁴ Section 88 (1) (ii) 1999 Constitution.

Recommendation	Implementers
 Recommendation 2: Security votes should be appropriated for only MDAs with CCSF. In essence, the only MDAs that should require secret spending are those that: gather and process local and foreign intelligence. work with military and intelligence allies of the country. counter military and intelligence adversaries of the country. engage in war or armed conflict on behalf of the country. investigate crimes against individuals, institutions and the State (country). arrest and prosecute offenders. protect witnesses and whistle-blowers. deter organised crime. 	The NASS
Recommendation 3: MDAs may have votes for security-related issues but not for issues that cannot be openly disclosed. An MDA that does not have CCSF should not have any need to spend money in secret.	All MDAs
Recommendation 4: Security votes should be linked to the strategic and operational plans of the receiving MDA. To this extent, the monitoring and evaluation plans of these MDAs should include their secret expenditure.	MDAs with continuous core security function

Recommendation	Implementers
Recommendation 5: Security votes are not for items already included in the budget. Duplication of budgetary items is prohibited, and such items cannot be duplicated using security votes as a disguise.	MDAs with continuous core security function
Recommendation 6: New legislation in relation to security votes should complement existing laws preventing abuse of public funds and not conflict with those laws. Particular note should be made of avoiding the erroneous view that the constitution prevents the scrutiny of security votes.	The NASS
Recommendation 7: There is need for a permanent national security clearance scheme.	CSOs NSC
The scheme can have various levels ranging from unclassified (publicly available), declassified (publicly available), protected, restricted, confidential, secret, top secret	MDAs with CCSF
Different matters including the amounts of money that can be handled or authorised by each level	
The highest level of security clearance is to be approved by the national security council. Things to be considered for all levels should include: previous affiliation or association with terrorists or terrorist groups; weakness of character exemplified through actions such as domestic violence, embarrassing debt, sexual misconduct, examination misconduct; conflict of interest	

Recommendation	Implementers
exemplified through matters such as present or previous work for a foreign government;	
The scheme will specify those who can keep their clearance level after leaving service. It will also specify duration of after-service application of the clearance level.	
The scheme will identify circumstances in which the clearance will be withdrawn. [for example when the older no longer needs it, e.g left parliament or relevant parliamentary committee; conflict of interest e.g acquires nationality of another country; commits a crime involving dishonesty, violence or a breach of the security clearance or; becomes indebted up to an amount his security clearance allows him to authorise, etc)	
Recommendation 8: There needs to be a categorisation of items on which security votes are spent and the level of clearance required to have access to the items.	NSC
Recommendation 9: A practicable system of legislative oversight can be implemented after the categorisation of items (Recommendation 8) and security clearance system have been put in place (Recommendation 7).	The NASS
The oversight function can be by committee which meets behind closed doors.	
Members of the committee should have appropriate security clearance	

Recommendation	Implementers
Recommendation 10: Internal standard	MDAs with CCSF
operating procedures for disbursing and	NSA
monitoring security votes should be	NSC
developed by MDAs with CCSF.	
Recommendation 11: External audit of	
security votes by the Auditor General.	
The security votes to be audited by the	NSA
Auditor General should be in two	
categories (i) those submitted directly by	
the Head of the agency (depending on	
the category) and (ii) those submitted	
through and with the approval of the	
NSA.	
Recommendation 12: All MDAs without	ACAS.
CCSF should be audited to ensure that	
they have not been using security votes	
for corrupt enrichment.	

5. Conclusion

Accountability as a mechanism is crucial for preventing corruption and ensuring good governance. Accountability is not necessarily the same as openness. While accountability is possible and necessary to prevent corrupt use of secret security expenditure, openness may not be practicable in such confidential security matters. The present arrangement where virtually all MDAs can have access to money to be spent in secret is a recipe for encouraging abuse of public funds. Without a doubt, corrupt use of security votes is inimical to National Security. The threat to National Security is heightened by the situation where hundreds of public officials who have no security vetting or clearance have access to huge sums of money that they can use discretionarily. These security votes can be easily applied towards financing criminal enterprises of all kinds.

At the same time, momentous harm to National Security can arise from the public disclosure of some information or data relating to security votes.

The recommendations put forward in this Policy Brief will help balance the need for secrecy with the imperative of accountability. These recommendations are primarily focused on Federal-level interventions. They are, nevertheless, relevant and applicable to sub-national entities.
